Line Immunoassays (LIA)

Specific diagnostic and differentiation

High quality products for reliable results

Line immunoassays are prepared by coating antigens in lines on a nitrocellulose membrane. Bound autoantibodies are made visible by using HRP-conjugated secondary antibodies and a LIA-specific substrate.

A cut-off line simplifies the determination of positive samples. It also enables the detection of borderline and negative bands, which allows very early detection of autoantibodies presence. IMTEC-LIA is closely monitored throughout the production process.

The consistency of the results is verified regularly in external quality controls trials.

Innovative new products

The unique IMTEC-Arthritis-LIA includes all parameters required for the diagnosis of rheumatoid arthritis. It contains the parameter ACPA (anti-citrullinated peptide antibodies) and rheumatoid factor, recommended by ACR/EULAR criteria to diagnose rheumatoid arthritis. It is completed by the bands for RA33 for improved disease prediction and SSA and SSB antibodies to allow early detection of the overlap with Sjögren's syndrome. Together with the new IMTEC-ANA-LIA XL, specifically designed to improve the accuracy in rheumatic diseases diagnosis, and the updated HumaScan^{FA} software, HUMAN continues to commit itself to innovative autoimmune disease diagnostics.

30 years of experience in autoimmune diagnostics

IMTEC GmbH was founded in 1990 and has been part of the HUMAN Group since 2006. For 30 years, the brand IMTEC has been synonymous for high-quality and future-oriented products in the field of autoimmune diagnostics.

IMTEC-Gastro-LIA	
d-Gliadin

Simplify LIA processing and interpretation with HumaBlot 44^{FA} and HumaScan^{FA}

HumaBlot 44^{FA} is a fully automated system for processing line immunoassays. It performs all steps from the handling and dilution of samples and reagents to the scanning of strips and the test interpretations. LIA interpretation can be performed by the HumaScan^{FA} software, which is integrated into HumaBlot 44^{FA}, but can also be used separately with a flatbed scanner.
