# Pancreatic elastase

**Pancreatic elastase** is produced in the acinar cells of the pancreas. A reduced level of this protein in the gastrointestinal tract is related to pancreatic insufficiency. It typically occurs as a result of progressive pancreatic damage, because of several pathological conditions.

Human pancreatic elastase 1 (E1) remains undegraded during intestinal tract, which makes pancreatic elastase a perfect biomarker.

**Pancreatic elastase Turbilatex®** is a non-invasive in vitro diagnostic method used to monitorize pancreatic function, revealing pancreatic insufficiency in the patient.

**Pancreatic elastase Turbilatex®** is:

- Fecal testing
- Quantitative
- Based on monoclonal antibodies detection
- Liquid and ready to use
- Long shelf-life
- Adaptable to any analyser
