# H. pylori

*Helicobacter pylori* (*H. pylori*) is a bacteria in helical bacillus shape, found in the human gastric epithelium in more than 50% of the global population.

There is significant correlation between the presence of this bacteria in the stomach and certain gastrointestinal diseases, including gastritis, gastroduodenal peptic ulcers, gastric carcinoma and mucosa-associated lymphoid tissue (MALT) lymphoma. In particular, the presence of *H. pylori* in the stomach is indicated as a fundamental etiological factor of gastric cancer.

Therefore, the discovery of a sensitive and non-invasive method able to detect the presence of *H. pylori* quickly and without error may be of enormous use.

**CerTest has developed the first turbidimetric test for the detection and quantification of an antigen present in feces when *H. pylori* colonizes the stomach.**

With CerTest **H. pylori Turbilatex®** it is possible to perform a rapid, simple screening which determines the presence or absence of the bacteria in the patient's stomach.

## Our provided kits:

**FOB Turbilatex®**

**Calprotectin Turbilatex®**

**Transferrin Turbilatex®**

**Pancreatic elastase Turbilatex®**

**H. pylori Turbilatex®**
